

Case Study

# Scottish Rugby Union

BT Murrayfield Stadium

Location

Edinburgh

Duration

8 Months

Value

£1.5m

This project involved the strip out and replacement of the boilers within the North, South and West Stands and Undersoil plantrooms at Murrayfield.

As well as the installation of the boilers and new heating pipework arrangement, the other mechanical works we delivered, included the installation of the updated gas systems and automatic controls, all of which were also commissioned by ourselves. As BT Murrayfield stadium is a live arena, it was crucial to have excellent communications with the client in order to programme and schedule around stadium events to ensure there were no delays or disruption.

"Congratulations on a good job, well done!"

David Burrows, Senior Project Manager
